## Description

Electronic circuit protector type ESX10 is designed to ensure selective disconnection of DC 24 V load systems.

DC 24 V power supplies, which are widely used in industry today, will shut down the output in the event of an overload with the result that one faulty load in the system can lead to complete disconnection of all loads. As well as an unidentified failure this also means stoppage of the whole system.

Through selective disconnection the ESX10 responds much faster to overload or short circuit conditions than the switch-mode power supply. This is achieved by active current limitation. The ESX10 limits the highest possible current to values between 1.3 to 1.8 times the selected rated current of the circuit protector. Thus it is possible to switch on capacitive loads of up to $\mathbf{7 5 , 0 0 0} \boldsymbol{\mu F}$ lamp loads, but they are disconnected only in the event of an overload or short circuit.

For optimal alignment with the characteristics of the application the current rating of the ESX10 can be selected in fixed values from 0.5 A... 12 A . Failure and status indication are provided by a multicolour LED and an integral short-circuit-proof status output or a potential-free signal contact.

The ESX10, with a width of only 12.5 mm , can be plugged into the E-T-A power distribution socket Module 17plus ensuring ease of installation and saving space in control cabinets.

Upon detection of overload or short circuit in the load circuit, the MOSFET of the load output will be blocked to interrupt the current flow. The MOSFET and the load circuit may be re-activated via the remote electronic reset input or manually by means of the ON/OFF button. When starting up the system, the load circuit may also be manually disconnected.

US patent number: US 6,490,141 B2

## Features

- Selective load protection, electronic trip characteristics.
- Active current limitation for safe connection of capacitive loads up to $75,000 \mu \mathrm{~F}$ and on overload/short circuit.
- Current ratings 0.5 A... 12 A .
- Reliable overload disconnection with $1.1 \times \mathrm{I}_{\mathrm{N}}$ plus, even with long load lines or small cable cross sections (see table 3).
- Manual ON/OFF button (S1).
- Clear status and failure indication through LED, status output SF or Si contact $F$.
- Electronic reset input RE (option).
- Integral fail-safe element.
- Width per unit only 12.5 mm .
- Plug-in mounting utilising power distribution system Module 17plus or SVSxx optionally (see product group Power distribution systems)
- Additional versions with ATEX approval available.

Technical data ( $\mathrm{T}_{\text {ambient }}=25^{\circ} \mathrm{C}$, operating voltage $\mathrm{U}_{\mathrm{S}}=\mathrm{DC} 24 \mathrm{~V}$ )

## Operating data

| Operating voltage $\mathrm{U}_{\mathrm{S}}$ | DC 24 V (18... 32 V ) |
| :---: | :---: |
| Current rating $\mathrm{I}_{\mathrm{N}}$ | fixed current ratings: $0.5 \mathrm{~A}, 1 \mathrm{~A}, 2 \mathrm{~A}, 3 \mathrm{~A}$, $4 \mathrm{~A}, 6 \mathrm{~A}, 8 \mathrm{~A}, 10 \mathrm{~A}, 12 \mathrm{~A}$ |
| Closed current $\mathrm{I}_{0}$ | ON condition: typically 20... 30 mA depending on signal output |
| Status indication by means of | - multicolour LED: <br> GREEN: <br> unit is ON, power-MOSFET is switched on <br> - status output SF ON, supplies +DC 24 V <br> ORANGE: <br> in the event of overload or short circuit until electronic disconnection <br> RED: <br> - unit electronically disconnected <br> - load circuit/Power-MOSFET OFF <br> OFF: <br> - manually switched off (S1 = OFF) or device is dead <br> - undervoltage ( $\mathrm{U}_{\mathrm{S}}<8 \mathrm{~V}$ ) <br> - after switch-on till the end of the delay period <br> - status output SF (option) <br> - potential-free signal contact $F$ (option) <br> - ON/OFF/ condition of switch S1 |
| Load circuit |  |
| Load output | Power-MOSFET switching output (high side switch) |
| Overload disconnection | typically $1.1 \times \mathrm{I}_{\mathrm{N}}\left(1.05 \ldots 1.35 \times \mathrm{I}_{\mathrm{N}}\right)$ |
| Short-circuit current $\mathrm{I}_{\mathrm{K}}$ | active current limitation (see table 1) |
| Trip time for electronic disconnection | see time/current characteristics typically 3 s at $\mathrm{I}_{\text {Load }}>1.1 \times \mathrm{I}_{\mathrm{N}}$ typically $3 \mathrm{~s} . .100 \mathrm{~ms}$ at $\mathrm{I}_{\text {Load }}>1.8 \times \mathrm{I}_{\mathrm{N}}$ (or $1.5 \times \mathrm{I}_{\mathrm{N}} / 1.3 \times \mathrm{I}_{\mathrm{N}}$ ) |
| Temperature disconnection | internal temperature monitoring with electronic disconnection |
| Low voltage monitoring load output | with hysteresis, no reset necessary load "OFF" at $\mathrm{U}_{\mathrm{S}}<8 \mathrm{~V}$ |
| Starting delay $\mathrm{t}_{\text {start }}$ | typically 0.5 sec after every switch-on and after applying $U_{S}$ |
| Disconnection of load circuit electronic disconnection |  |
| Free-wheeling circuit | external free-wheeling diode recommended with inductive load |
| Several load outputs must n | t be connected in parallel |

Technical data ( $\mathrm{T}_{\text {ambient }}=25^{\circ} \mathrm{C}$, operating voltage $\mathrm{U}_{\mathrm{S}}=\mathrm{DC} 24 \mathrm{~V}$ )

Status output SF

| Electrical data | plus-switching signal output, connects $U_{S}$ to terminal 12 of module 17plus nominal data: DC $24 \mathrm{~V} /$ max. 0.2 A (short circuit proof) status output is internally connected to GND with a 10 kOhm resistor |
| :---: | :---: |
| Status OUT | ESX10-104/-106/-124 (signal status OUT), at $U_{S}=+24 \mathrm{~V}$ <br> $+24 \mathrm{~V}=\mathrm{S} 1$ is ON , load output connected through $\mathrm{OV}=\mathrm{S} 1$ is ON , load output blocked and/or switch S1 is OFF |
| Status OUT | ESX10-127 (signal status OUT inverted), at $U_{S}=+24 \mathrm{~V}$ <br> $+24 \mathrm{~V}=\mathrm{S} 1$ is ON , load output blocked, red LED lighted <br> $\mathrm{OV}=\mathrm{S} 1$ is ON , load output connected through and/or switch S1 is in OFF position |
| OFF condition | 0 V level at status output when: <br> switch S1 is in ON position, but device is still in switch-on delay <br> switch S1 is OFF, or control signal OFF, device is switched off <br> no operating voltage $U_{S}$ |
| Signal output F | ESX10-103/-115/-125 |
| Electrical data | potential-free signal contact max. DC $30 \mathrm{~V} / 0.5 \mathrm{~A}$, min. $10 \mathrm{~V} / 10 \mathrm{~mA}$ |
| ON condition LED green | voltage $U_{S}$ applied, switch $S 1$ is in ON position no overload, no short circuit |
| OFF condition LED off | - device switched off (switch S1 is in OFF position) no voltage $U_{S}$ applied |
| Fault condition LED orange | overload condition $>1.1 \times I_{N}$ up to electronic disconnection |
| Fault condition LED red | electronic disconnection upon overload or short circuit |
|  | device switched off with control signal (switch S1 is in ON position) |
| ESX10-101 | single signal, make contact contact SC/SO-SI open |
| ESX10-102 | single signal, break contact contact SC/SO-SI closed |
| ESX10-103 | group signal change-over contact contact SC-SO open, SC-SI closed |
| ESX10-115/-125 | group signal, make contact contact SC-SO open |
| Fault | signal output fault conditions: <br> no operating voltage $U_{S}$ <br> - ON/OFF switch S1 is in OFF position <br> - red LED lighted (electronic disconnection) |

Table 1: voltage drop, current limitation, max. load current

| current <br> rating $\mathrm{I}_{\mathrm{N}}$ | typically voltage drop $U_{O N}$ at $I_{N}$ | active current limitation (typically) | max. load current at 100 \% ON duty |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\mathrm{T}_{U}=40^{\circ} \mathrm{C}$ | $\mathrm{T}_{U}=50^{\circ} \mathrm{C}$ |
| 0.5 A | 70 mV | $1.8 \times \mathrm{I}_{\mathrm{N}}$ | 0.5 A | 0.5 A |
| 1 A | 80 mV | $1.8 \times \mathrm{I}_{\mathrm{N}}$ | 1 A | 1 A |
| 2 A | 130 mV | $1.8 \times \mathrm{I}_{\mathrm{N}}$ | 2 A | 2 A |
| 3 A | 80 mV | $1.8 \times \mathrm{I}_{\mathrm{N}}$ | 3 A | 3 A |
| 4 A | 100 mV | $1.8 \times \mathrm{I}_{\mathrm{N}}$ | 4 A | 4 A |
| 6 A | 130 mV | $1.8 \times \mathrm{I}_{\mathrm{N}}$ | 6 A | 5 A |
| 8 A | 120 mV | $1.5 \times \mathrm{I}_{\mathrm{N}}$ | 8 A | 7 A |
| 10 A | 150 mV | $1.5 \times \mathrm{I}_{\mathrm{N}}$ | 10 A | 9 A |
| 12 A | 180 mV | $1.3 \times \mathrm{I}_{\mathrm{N}}$ | 12 A | 10.8 A |

Attention: when mounted side-by-side without convection the ESX10-0.. should not carry more than $80 \%$ of its rated load with $100 \%$ ON duty due to thermal effects.

Technical data ( $\mathrm{T}_{\text {ambient }}=25^{\circ} \mathrm{C}$, operating voltage $\mathrm{U}_{\mathrm{S}}=\mathrm{DC} 24 \mathrm{~V}$ )

Reset input RE
Electrical data

Reset signal RE (= terminal 13,14 or 12 of Module 17plus)

Caution: unused slots have to be fitted with jumpers

|  | The reset simultaneously affects all blocked <br>  <br> ESX10-124/-127 channels of the power <br> distribution system, all switched on |
| :--- | :--- |
|  | ESX10-124/-127 channels remain <br> unaffected. With type ESX10-125 the reset <br> only affects the device concerned. By <br> connecting the individual terminals 12 of <br> the Module 17plus a joint reset signal for <br> all ESX10-125 may be generated. |

## Preferred types

| Preferred types | Standard current ratings (A) |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 6 | 8 | 10 | 12 |
| ESX10-103-DC24V | x | x | x | x | x | x | x | x |

## Please note:

- The user should ensure that the cable cross sections of the relvant load circuit are suitable for the current rating of the ESX10 used.
- Automatic start-up of machinery after shut down must be prevented (Machinery Directive 98/37/EG and EN 60204-1). In the event of a short circuit or overload the load circuit will be disconnected electronically by the ESX10.

## ESX10 Signal inputs / outputs (wiring diagram)

## ESX10 signal inputs / outputs (wiring diagrams)

Signal contacts are shown in the OFF or fault condition.

## ESX10-100

without signal input/output

ESX10-115-...
with control input IN+ (+DC 24 V with signal output F (group signal, N/O)

operating condition: SC-SO closed
fault condition: SC-SO open

ESX10-103
without signal input
with signal output F (group signal, change-over)

operating condition: SC/SO closed, SC-SI open fault condition: SC/SO open, SC-SI closed

ESX10-124-..
with reset input RE (+DC $24 \mathrm{~V} \downarrow$ )
with status output SF (+24V = load output ON)

operating condition: $\mathrm{SF}+24 \mathrm{~V}=\mathrm{OK}$ fault condition: SF OV

ESX10-104
without signal input
with status output SF (+24 V = load output ON)

operating condition: $\mathrm{SF}+24 \mathrm{~V}=\mathrm{OK}$ fault condition: SF OV

ESX10-125-...
with reset input RE ( +DC $24 \mathrm{~V} \downarrow$ ) with signal output F (group signal, $\mathrm{N} / \mathrm{O}$ )

operating condition: SC-SO closed fault condition: SC-SO open

This is a metric design and millimeter dimensions take precedence ( $\frac{\mathrm{mm}}{\mathrm{inch}}$ )
All dimensions without tolerances are for reference only. In the interest of improved design performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes. Errors and omissions excepted.
